

DEVANSH SHARMA

AI/ML-Focused Python Developer | Applied AI Systems

Jabalpur, Madhya Pradesh | devanshsharma8029@gmail.com
linkedin.com/in/devanshsharma987 | github.com/RootDeveloperDS

PROFESSIONAL SUMMARY

Python developer focused on applied AI and intelligent systems. Proven experience building AI-powered desktop applications utilizing LLM APIs, automation pipelines, and real-time user interaction systems. Strong capability in integrating AI models into functional, user-facing products with a strict focus on system performance, modular architecture, and solving practical engineering problems.

EXPERIENCE

Applied AI Developer

2024 – Present

Independent Projects

- Architected and built AI-powered applications utilizing LLM APIs for task automation, semantic processing, and natural language interaction.
- Designed and implemented modular AI systems that separate input processing, inference generation, and execution layers for highly scalable applications.
- Developed real-time computing systems integrating speech recognition, text-to-speech, and direct system command execution.
- Created automation pipelines to significantly reduce manual workflows utilizing Python-based system tools.
- Optimized heavy application performance by engineering asynchronous execution, reducing blocking operations, and improving memory handling.

PROJECTS

VISAR EDGE – System-Wide AI Environment (In Progress)

Tech Stack: Python, PySide6, WebView, LLM APIs

- Developing an advanced, system-wide AI assistant featuring a persistent GUI and real-time context awareness across desktop and mobile environments.
- Implemented background monitoring pipelines (including clipboard tracking) to enable context-based, zero-click AI response generation.
- Designed a highly modular system architecture focusing on applied AI orchestration, tool usage, and continuous feature expansion.

J.A.R.V.I.S. – Desktop AI Assistant

Tech Stack: Python, Tkinter, LLM APIs, SpeechRecognition, gTTS

- Built a comprehensive, voice-enabled AI assistant capable of executing deep system-level commands and opening local applications.
- Integrated conversational AI models to facilitate reliable task execution and dynamic user interaction.
- Engineered a seamless, real-time input processing and response generation pipeline for ultra-low latency interactions.

Workflow Automation Suite

Tech Stack: Python

- Developed standalone Python scripts focused on system optimization, complex file handling, and localized workflow automation.
- Replaced repetitive manual operational tasks with intelligent, conditional automation logic.

TECHNICAL SKILLS

- **Core Competencies:** Applied AI Systems, LLM Integration, System Architecture, Prompt Engineering, Automation Logic
- **Programming Languages:** Python, C++, SQL
- **Libraries & Frameworks:** PySide6, Tkinter, Flask
- **AI & Audio Tools:** LLM APIs (Gemini, Groq, Claude), SpeechRecognition, gTTS
- **System Concepts:** Async Processing, I/O Pipelines, Modular Architecture, Hardware Acceleration

EDUCATION

Bachelor of Technology – Computer Science (AI/ML)

2024 – 2028

GGITS | Jabalpur, Madhya Pradesh

CERTIFICATIONS & LANGUAGES

- **Certifications:** NVIDIA Deep Learning (Intro), Python Essentials, C++ Essentials, IT Essentials
- **Languages:** English (Professional), Hindi (Native)
